Objective

Senior Mobile Developer with 5+ years of experience delivering Android and iOS products. Built e-commerce applications from the ground up, modernized high-traffic codebases, and led cross-functional engineering efforts. Hands-on expertise in Kotlin, Swift, scalable architecture, CI/CD, release management, performance optimization, and AI-assisted development. Published multiple applications through Google Play Console and App Store Connect while mentoring engineers and improving delivery quality.

Experience

Akakçe & Banayeni | Mobile Developer

2024 – Present (Ankara, TR)

- Built and launched the Banayeni applications for Android and iOS, covering architecture, implementation, testing, and store delivery.
- Developed native features with Kotlin and Swift using lifecycle, navigation, networking, and local persistence components.
- Managed Google Play Console and App Store Connect releases, including signing, certificates, provisioning profiles, TestFlight, and staged rollouts.
- Established automated build and QA pipelines, reducing manual release effort by 40%.
- Collaborated with product and design teams to deliver consistent e-commerce experiences across both platforms.

Akakçe | Android Developer

2022 – 2024 (Ankara, TR)

- Led the migration from Java to Kotlin and introduced MVVM, Clean Architecture, and modular application components.
- Built the Overview module with Jetpack Compose, improving UI maintainability and accelerating feature development.
- Improved release reliability through Jenkins-based CI/CD automation, reducing build times by 30%.
- Implemented offline-ready networking and local persistence using Retrofit and Room.
- Increased crash-free sessions from 95% to 99% through stability monitoring and targeted improvements.
- Applied Material Design principles to deliver a consistent and accessible user experience.

Mobillum | Android Developer

2021 – 2022 (İstanbul, TR)

- Delivered Kotlin-based features using MVVM within a modular and scalable application structure.
- Integrated ViewModel, LiveData, ViewBinding, and Retrofit with resilient API error handling.
- Improved usability by applying platform design guidelines and consistent interface patterns.
- Contributed to peer reviews, coding standards, and team-wide engineering best practices.

Projects

- **Akakçe App** – Java-to-Kotlin migration and platform modernization for a high-traffic product serving more than 1 million users.
- **Banayeni App** – End-to-end e-commerce application released for Android and iOS.
- **Overview (Jetpack Compose)** – Internal Jetpack Compose module created to modernize the interface and improve maintainability.
- **Play Off (Google Play)** – Casual game published on Google Play.
- **Codever (Google Play)** – Developer tools and utilities application for Android devices.
- **Worqee** – Internal workflow and collaboration product that improved team productivity and streamlined operations.

Technical Skills

- **Programming Languages:** Kotlin, Swift, Java, Python
- **Android:** Android SDK, Jetpack Compose, ViewModel, Navigation, ViewBinding, Coroutines, Hilt, Retrofit, Room, Material Design
- **iOS:** SwiftUI, UIKit, Combine, Core Data, URLSession
- **Architecture:** MVVM, Clean Architecture, modularization, distributed systems, offline-first design
- **Delivery & QA:** Git, GitHub, Jenkins, CI/CD, automated testing, static analysis, code review, Postman
- **Data & Analytics:** Firebase Analytics, Remote Config, A/B Testing, BigQuery
- **Release Management:** Google Play Console, App Store Connect, TestFlight, staged rollouts, signing, certificate and provisioning management
- **AI-Assisted Development:** OpenAI Codex, ChatGPT, and Claude for code generation, refactoring, code review, debugging, test scaffolding, technical documentation, and workflow automation

Languages

Turkish: Native

English: Professional Working Proficiency (B2)

Education

Erciyes University — BSc in Computer Engineering

2015 – 2020

Major: Android Development | Minor: Mobile Security
